

Google An Intelligence Enhancer

Though you have some who believe Google is as source of decrease in human intelligence, it may be doing the opposite. Google is a tool that allows the user to search and find a topic. People can learn a lot from Google whether they know it or not. Using Google features you can search a topic and have results within seconds. This allows us to have more time reviewing and studying that topic versus using the library which it would take a lot of time finding the topic or important information about that topic. Carr mentions this in his argument, I can prove this because the text says, " Research that once require days in the stacks or periodical rooms of libraries can now be done in minutes". This shows how people have a change in mind and behavior when they no longer have to work. Though you have some who believe Google is as source of decrease in human intelligence, it may be doing the opposite. Google is a tool that allows the user to search and find a topic. People can learn a lot from Google whether they know it or not. Using Google features you can search a topic and have results within seconds. This allows us to have more time reviewing and studying that topic versus using the library which it would take a lot of time finding the topic or important information about that topic. Carr mentions this in his argument, I can prove this because the text says, " Research that once require days in the stacks or periodical rooms of libraries can now be done in minutes". This shows how people have a change in mind and behavior when they no longer have to work hard. This is important because this proves that Google isn't the problem it's people who have become lazy by getting use to the benefits of having Google. This means Google does not cause an negative effect on our knowledge. The only way Google will change how smart a person is, is by teaching them, causing that person to become smarter. In fact, you have schools that already have incorporated technology into their learning. If it's true that Google is causing people to become less intelligent, then why do you have certain places that uses Google to enhance the education of their students.

In conclusion, Google is not triggering a declined in human intelligence. Most people probably come to such conclusion due to the increase in people becoming used to the more simpler method of using Google. It's important to know that as technology increases and become less complex, humans will still continue to become smarter but, will also become more and more dependent on this technology thus, becoming lazy. In conclusion, I believe Google makes people smarter and disagree with Carr's argument about the alerting affect Google has on people. hard.
